What we offer

Custom projects

We value creative approach, but always aim at matching the UI/UX best practices with your expectations and taste. Only after you approve the frameworks and design concept we will move forward.

The code is always pushed for review before final deployment to reveal all errors, bugs, and defects. After we are sure all features perform as expected the project goes live.

It's not enough to develop an awesome website or app. Your project should stay awesome for a long time after launch. Our expert team will help you apply those minor tweaks and improvements that keep your product both trendy and secure.

This stage is very important to make sure we fully understand your goals and the direction you'd like to take your product. Discovering your passions and vision, we'll have a project concept.

Here we leave no stone unturned to provide you with a specification to ensure a smooth development process. We normally approve the project plan, gather requirements, and provide mockscreens.

Upon approval we launch the development process based on the specification and design. This stage is thoroughly controlled by our PM who regularly reports on the development progress and delivery.

What we offer

Dedicated teams

We know what it takes to establish a truly result driven team. While you have 100% control over your guys, our HR department will be always available to provide support during the probation period and further recommendations on developing your employees' both hard and soft skills.

You can add new team members anytime, extend your team's expertise, and attract additional talent outside your team if needed. We'll regularly provide you with an up-to-date information from the market, benchmarking and advice on further team scaling.

Send requirements

Interview candidates

Team onboarding

Launch the project

Scale your team

Fast recruitment process allows us to extend your in-house team with top tech talent within one month. If you'd like to set up a team from scratch, together we will define the requirements for all candidates in order to establish a well-balanced and efficient remote team.

We apply a multi-step approach to interview each candidate specifically for your project. This way we make sure every future team member will be a perfect match for your team. The final stage is always an interview with a customer who makes the final decision.

At this stage the core team is already hired and the working process goes its way. Most of our customers usually come to visit their team to establish a strong bond between the main office and the remote development force.

**WHY USE
Machine Learning
and AI?**

For a wide array of goals. Machine Learning stands behind all major data security solutions, state-of-the-art search engines, data science projects, and cutting-edge digital products. Zfort Group AI team helps businesses reinvent their strategies by integrating smart AI solutions to deliver great customer experience and outperform the competition.

WE CONVERT AI
into a reality
for your industry

AI Development Services

Zfort Group helps technology startups and established companies harness the power of AI and drive innovation within their industries.

Reshape the Future of Your Software Product with Artificial Intelligence:

MACHINE LEARNING

Collect unstructured data and apply it for your business growth. Turn free-format into a pipeline of actionable business insight, and increase engagement to generate even more data.

DEEP LEARNING

Discover behavioral patterns that common software fails to distinguish, utilize complex ready-to-use packages and customize them to match objectives of your software product.

CONVERSATIONAL AI

Engage your customers with a human-like, intelligent conversational AI via any channel, device, service, in any language, from anywhere. Deliver advanced customer experience and increase ROI.

PREDICTIVE ANALYSIS

Use data mining and statistics to make predictions and determine patterns, trends, and future outcomes to help you make smarter decisions for your growing business.

Technology focus

Artificial Intelligence

Take your business to the next level by implementing self-learning software. We'll help you discover how machines learn and will also help you make the most of this technology for your business.

Fintech

Decade-long cooperation with companies from the fintech industry allows us to deliver smart and innovative solutions for banking, financial and insurance companies worldwide.

Big Data

Big data architecture design, data science platforms, and even big data-based machine learning solutions

Cloud Computing

We'll help you cut the operational costs by implementing SaaS (Software as a Service), IaaS (Infrastructure as a Service), or PaaS (Platform as a Service) solutions.

Blockchain

Smart contract development and audit, enterprise cryptocurrency blockchain development, tokenization solutions, and distributed document systems development.

Internet of Things

Our expert team helps building end-to-end IoT solutions for better security, analysis, and optimization for both startups and large enterprises.

Let's do something awesome together!
